LEARNING Interactives

An interactive for an Anatomy and Physiology course. This activity was developed in part to revise and replace aging flash content within a course. HTML5 responsive content was delivered for an improved user experience. This was paired with a Rise module which featured knowledge checking assessments.

INTERACTIVE Lecture

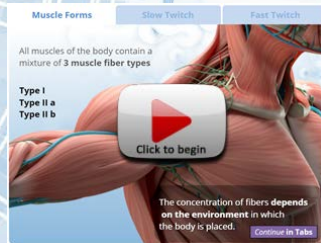

Starting with a black and white power point a final lecture capture was designed, recorded, edited and deployed remotely for the online course. During design development feedback and changes were made to fit the presenter's taste and speaking style. Specific graphics and animations were often developed to enhance the topic. In this case of CVDs (below) these body illustrations were created to show the different types of mechanical interfaces that could be administered during
